
CodeModel

Release 0.0.5.dev0

Nov 29, 2019

Contents

Coming soon: documentation for CodeModel. CodeModel is an advanced set of metaprogramming tools that serves as the backend for several projects currently in development. Once those projects become public, the full documentation of CodeModel (which contains many references to those projects) will be unveiled!

The source code for CodeModel is already public, so you're welcome to use it in your own projects. However, we'll hold off on telling you how we're using it until our own projects work.
